# Ecosystem Overview

# Supporting Products of TONCOIN Ecosystem

## Category

## Key Platforms/Projects

Wallets

Telegram Wallet, Tonkeeper, Tonhub, OpenMask, MyTonWallet

DEX Platforms

STON.fi, Dedust.io, Megaton Finance

Browser  
Extensions

Tonkeeper Extension, OpenMask Wallet

Web3  
Applications

TON DNS, TON Storage, TON Sites, Telegram Wallet Bots

# Supporting Products of TONCOIN Ecosystem

## Category

Gaming Initiatives

NFT  
Marketplaces

Other Projects

## Key Platforms/Projects

TON Punks, Fanton Fantasy League, Tap Fantasy Game, StormTrade

Getgems.io, TON Diamonds, Disintar.io

TON Proxy, TON Payments, TON Wallet Bots, Open League (Gaming)

# TONCOIN Global Market Position

## Listed on:

Binance, OKX, KuCoin,  
Bybit, MEXC, Huobi,  
and others

## Global Reach

Active in over 340  
markets

## Ranking

Consistently in the Top 15 on  
CoinMarketCap and  
CoinGecko

## Daily Trading Volume

Exceeds \$100 million

# Blockchain Industry Comparison

Attribute	TONCOIN	Ethereum	Solana
Blockchain Type	Layer-1	Layer-1	Layer-1
Launch Year	2021 (Community Relaunch)	2015	2020
Transaction Speed	Millions TPS (theoretical)	~30 TPS	~65,000 TPS
Consensus Model	Proof-of-Stake	Proof-of-Stake	Proof-of-History + PoS
Risk Profile	Low (Telegram-backed)	Moderate (variable gas fees)	High (frequent outages)

# Arbiex.io – AI-Based Arbitrage Trading Platform

## Overview:

**Arbiex.io is a decentralized and Centralized, AI-powered arbitrage trading platform that enables users to trade across multiple blockchains and 15 DEX and 35 CEX , including BEP-20, ERC-20, Polygon, Solana, and TON.**

# Key Features

1. **Free Registration**
2. **Bot Activation:** \$50 annual subscription fee
3. **DEX/CEX Integration:** Connects with user-preferred DEX/CEX exchanges
4. **Supported EVM DEXs:** PancakeSwap, Uniswap, SushiSwap, many more
5. **Supported TON DEXs:** DeDust.io, STON.fi, many more
6. **Profit Range:** more than 0.20% to 0.60% Daily (Mon–Fri)
7. **Custom Features:** Profit targets, loss limits, futures/spot trading
8. All profits go directly to the user's wallet

# What is Arbitrage Trading in Cryptocurrency?

Arbitrage trading in crypto is the practice of buying a cryptocurrency at a lower price on one exchange and selling it at a higher price on another exchange to make a profit. The price difference happens due to market inefficiencies, and traders take advantage of these gaps to earn risk-free profits.

# Arbitrage Trading

Unlock the full potential of your investments by leveraging intelligent crypto arbitrage strategies that can help you maximize your gains & navigate the ever-changing market landscape.

# TONCOIN Arbitrage Trading & APY Staking Program

A powerful, AI-based arbitrage trading and staking platform developed jointly by the TONCOIN core team.

## Where Trading Happens:

All staked TONCOIN is traded by AI on leading TON decentralized exchanges:

- DeDust.io
- STON.fi

Trades focus on TON/USDC arbitrage, taking advantage of market fluctuations between platforms.

**Daily Arbitrage Income : Upto 2% (Monday to Friday)**

## How Rewards Are Distributed

The profit generated from arbitrage is distributed as:

- Daily APY Income – Passive income based on stake
- APY Royalty Income – Extra rewards based on staking level
- Royalty Club Pool – Shared pool income for top contributors
- Binary Income – Earn from team building under binary
- Salary Income – Earn weekly salary income from team

structure  All above incomes are paid in TONCOIN

# Additional Community Incentives

To encourage participation, extra incomes are distributed in:

**Direct Referral  
Income**

**Binary Matching  
Income**

**Royalty Club  
Pool Income**

**Salary/Reward  
Income**

**APY Royalty  
Income**

**These are currently  
paid in TONCOIN**

# The Open Network Classic Blockchain (TON Classic) & Native Coin (CTON)

**Officially Supported By:**

TON Blockchain Community

## What is TON Classic Blockchain?

A fork of the TON blockchain created to preserve the original decentralized philosophy of TON, similar to how Ethereum Classic split from Ethereum. It continues to operate under the original structure and governance model.

# What is a Classic Blockchain?

A Classic Blockchain preserves the foundational protocols and ideologies of a chain before major updates or governance shifts. Examples include:

- ✓ **Ethereum Classic (ETC)**
- ✓ **Bitcoin Cash**
- ✓ **Zilliqa Classic**

## Upcoming Change:

All incentive incomes will soon be transitioned to CTON – the native coin of the TON Classic Blockchain

# TON Classic vs Ethereum Classic:

Attribute	TON Classic (CTON)	Ethereum Classic (ETC)
Forked From	TON Blockchain	Ethereum
Purpose	Decentralized Staking & Rewards	Protocol immutability
Token Name	CTON	ETC
Launch Price	0.05\$	Market-driven
Supporters	Ton Core, AddTON Community	Ethereum Classic Org

# AddTON

An AI-based arbitrage trading program developed  
jointly by TONCOIN developers.
